

KIQ 1.1 — Quick Takeaway

KIQ: What functionalities and services do Metro's e-commerce platform and mobile app offer to support ordering and customer interaction?

Proxy Approach Used

Scopus scientific literature was used as proxy evidence through exploratory text mining methods including occurrence analysis and co-occurrence analysis.

Corpus A — Discovery & Interaction Layer

Dataset: 29 focused articles

- Product search
- Filtering and navigation
- Usability and user experience
- Recommendation and personalization
- Semantic retrieval mechanisms

Main Insight: Digital ordering platforms emphasize product discovery functionalities, search optimization, semantic retrieval, and interface usability to improve customer interaction and navigation efficiency.

Co-occurrence Insight: User interface, product search, semantics, and user experience appear strongly interconnected, suggesting that customer interaction quality depends heavily on search and interface design.

Corpus B — Ordering & Fulfillment Layer

Dataset: 300 articles

- Logistics and delivery
- Order management
- Marketplace ecosystems
- Supply-chain coordination
- Customer satisfaction and service efficiency

Main Insight: Digital commerce platforms are strongly associated with logistics integration, last-mile delivery, supply-chain coordination, and operational fulfillment efficiency.

Co-occurrence Insight: Marketplace platforms act as central structures connecting logistics, delivery, customer satisfaction, and user experience.

Overall KIQ 1.1 Insight

Modern digital ordering platforms combine two major capability dimensions: discovery and interaction functionalities (search, filtering, UX, recommendation) together with operational fulfillment capabilities (logistics, delivery, order

management, and marketplace coordination). These dimensions provide a conceptual framework for evaluating Metro's customer-facing digital services.

Methodological Takeaway

- 2 manageable proxy corpora
- Occurrence analyses completed
- Co-occurrence analyses completed
- SCI-oriented insights extracted
- Material ready for Shiny integration
